

Project Documentation: Retail Sales Analysis

Objective

The objective of this project is to analyze retail sales data and derive actionable insights.

Dataset Description

The dataset includes customer demographics, product categories, and sales transactions.

Tools Used

Python, Pandas, NumPy, Matplotlib/Seaborn

Key Insights

- Female customers generate the highest revenue
- Target age group is around 40 years
- Beauty products generate highest revenue
- Clothing category has maximum sales
- Electronics products have higher pricing

Analysis Performed

- Exploratory Data Analysis (EDA)
- Revenue analysis by gender
- Age group segmentation
- Product category analysis
- Pricing analysis

Conclusion

The analysis helps in identifying key revenue drivers and target customers. These insights can be used for better marketing and sales strategies.
